

ECONOMY V7 · TERRITORY & TOLLS · CONFIDENTIAL

Run a loop. Take the ground. Charge the toll.

The proven territory game underneath, an ownership layer on top. Attack, defend, upgrade, and get paid when people cross your land.

Prepared for	Version	Adds to	Core loop
Partner review	7.0	V6 — combat, tolls, tiers	Proven by INTVL

Start from what already works

INTVL is a running app that reached the top fifteen in health & fitness with a territory feature called Terra. Its mechanic is tested at scale. We take it as the foundation and build ownership on top.

What INTVL does — and we adopt

MECHANIC	HOW IT WORKS
Loop to claim	Run or ride a closed loop and <i>the whole area inside it</i> becomes yours. Not tile-by-tile stepping — enclosure. Bigger, smarter routes take more map.
Cut through to steal	Territory stays yours until someone else runs those streets. No permission, no formal challenge — running through simply takes it.
Re-run to defend	Go back over ground you hold to keep it. Defence is the same action as exercise.
Route planner	Preview a route before you go: see whose land you would take and how much new ground you would gain. This turns a run into a plan.
Layered leaderboards	Suburb, city, country, world. Most people chase their own neighbourhood, not the globe.
Area-weighted prize draws	Every km² held is one entry in a monthly draw for real prizes. Rewards without printing anything.
Tactics over speed	Deliberately does not favour elite runners. A clever 3 km loop beats a fast 10 km line.

WHY WE START HERE RATHER THAN INVENTING

This loop has been tested on real runners and it worked — it is **fun before it is financial**, which is the one thing every failed move-to-earn game got backwards. Our job is not to redesign the game. It is to add ownership, tolls and a token economy **without breaking what already works**.

What we add on top

Ownership that can be defended

In INTVL, anyone can take your land by running through it. That is exciting but nothing is ever really *yours*. We add **minting**: turn ground into a deed and it can no longer be taken by a casual pass — only by winning a contest.

Land that pays you

Every runner crossing your minted land pays you a **2% toll**. Your territory stops being a score and starts being a small business — busy ground earns, empty ground does not.

Attack and defence

Two rules, depending on whether the land has been minted. Unminted land is fast and brutal. Minted land is property, and taking it is a proper fight.

UNMINTED GROUND

Run through it. It's yours.

· No cost, no challenge, no waiting

· One run is enough — a single player can take a whole district in a morning

· You lose it the same way

· Defend by re-running your own loop

Fast, fluid, free. The INTVL game.

MINTED GROUND — A DEED

You have to win a siege.

· Running through pays a toll instead

· To take it: declare, stake, then a seven-day contest of who moves more

· Owner may fortify, up to three times

· Winner takes the deed. Loser's stake burns

Slow, costly, decisive. Real property.

Minting is the moment ground stops being a scoreboard and becomes something worth defending.

The seven-day siege, step by step

STEP	COST	WHAT HAPPENS
Declare	30 tokens	You name the deed you want. The owner is notified. A seven-day window opens.
Compete	free	Both sides record movement <i>inside that ground</i> . Counted once per person per day, so it is consistency not marathons.
Fortify	28 each, max 3	The owner can add +20% to their score, three times. Burned whether they win or lose.
Rally	free	Club mates who run the ground add to whichever side they support. One person, one contribution per day.
Settle	—	Higher score takes the deed. It transfers automatically — the loser cannot refuse . The loser's stake is burned.
Cool off	—	A beaten attacker cannot return for 30 days. A defender who just survived gets 14 days of peace.

WHY A SINGLE PLAYER CAN STILL WIN

Scoring counts **distinct people per day**, not total distance — but a determined solo runner who shows up every day for seven days beats a club of thirty who each turn up once. **Nobody is locked out by not having friends**, and nobody wins by buying anything: fortification helps, but it cannot beat a large gap in actual movement.

The toll

Cross someone's minted land and 2% of what you earned *there* goes to them. Cross ten people's land and you still pay about 2% in total — it cannot pile up.

You pay 2% of what you earned *inside each zone* — not 2% of your whole run.

So the toll is bounded by how far you went, never by how many owners you passed.

One 60-token run crossing six zones, four of them owned

Total toll: 1.3% of the run. Nothing new is minted — the toll is a transfer between players.

The runner barely notices. The owner of a busy path collects from hundreds of runners a week.

YOU CROSS...	YOU PAY	WHY
6 zones, none owned	0%	Most of the map is unowned, especially early
6 zones, 4 owned	1.3%	Only the owned portions are charged
10 zones, all owned	2.0%	The ceiling in practice
20 zones, all owned	2.0%	Still 2% — each zone is a smaller slice of the same run
Hard cap, whatever happens	5%	So a bad route can never feel like a punishment

THREE THINGS THE TOLL FIXES AT ONCE

It makes location matter — a deed on a popular path is worth far more than one in a dead cul-de-sac, so choosing ground becomes a real decision. **It rewards owners without printing anything** — every token an owner collects came from a runner, not from new supply. And **it makes owners want more runners**, which is exactly the incentive a growing network needs.

Your own land is free to cross. Unminted ground charges nothing — another reason minting is worth paying for.

Land tiers, and the cap that stops whales

Upgrading raises your share of every toll and your daily ceiling. It never creates income on its own — **empty land earns nothing however much you spent on it.**

TIER	UPGRADE COST	TOLL SHARE	DAILY CEILING	WHAT ELSE IT GIVES
1	—	1.00×	40	Base ground
2	140	1.25×	100	One quest slot, custom colour
3	380	1.55×	220	+10% defence, banner
4	900	1.90×	440	+20% defence, sponsor-ready
5	2,000	2.30×	820	+30% defence, name on the map

Same tier, different street

WHERE IT IS	TIER 1 EARNS	TIER 3 EARNS	TIER 5 EARNS
Dead suburb — 2 crossers a day	0.40	0.62	0.92
Quiet street — 12 a day	2.40	3.72	5.52
Busy path — 45 a day	9.00	13.95	20.70
High street — 140 a day	28.00	43.40	64.40

A tier-1 plot on a high street beats a tier-5 plot in a dead suburb by thirty times. Spending cannot substitute for choosing the right ground and drawing people to it. That is what keeps this a territory game rather than a yield farm.

The account cap

No account earns more than 900 tokens a day from land, ever.

However many plots you hold, however high the tier.

HOLDINGS	RAW CEILING	ACTUALLY PAID
1 tier-5 plot	820	820
3 tier-5 plots	2,460	900
20 tier-5 plots	16,400	900

Past roughly one well-placed tier-5 plot, buying more land adds status, defence and district control — but not income. A whale who corners a city collects no more than a committed local. **They still paid the upgrade costs, all of which were burned.**

The day your earnings become real

Every player earns the same token. Whether it can be sold depends on one thing: have you minted your land?

Nothing you already earned is retroactively unlocked — that is what stops anyone farming free accounts and cashing out later.

What a free player can already sell

Being unminted does not mean earning nothing tradable. Three routes exist from day one, and none of them mints a single new token:

ROUTE	SELLABLE?	WHERE THE TOKENS COME FROM
Staking your locked balance	The yield is	Stakers share the toll pool. Your principal stays locked for ever; what it pays you is liquid.
Sponsor challenges	Yes	Sponsors deposit existing tokens. Win one as a free player and it is yours to sell.
Monthly prize draws	Yes	Every km² you hold is one entry. Prizes are real goods or sponsor-funded tokens.
Everyday movement rewards	No	Newly minted, so locked. This is the supply we protect.

THE RULE UNDERNEATH ALL OF IT

Newly minted tokens are locked. Tokens that already existed are free to move. That single line explains every case: movement rewards are new, so they lock; toll income, staking yield, sponsor prizes and draw winnings are all transfers of tokens that already exist, so they don't. A free player can earn real, sellable value from day one — they just cannot mint it out of thin air.

Does it balance?

Illustrative models of the structure, not forecasts. At 100,000 players with a fixed 6M season pool.

WHERE TOKENS GO	WHO DOES IT	COST	PER PLAYER
Recharge land & gear	80%	15	12.0
Upgrade to tier 2	8%	140	11.2
Upgrade to tier 3	3%	380	11.4
Upgrade to tier 4	1%	900	9.0
Upgrade to tier 5	0.25%	2,000	5.0
Mint a deed	2%	400	8.0
Attack a rival's deed	15%	30	4.5
Fortify a defence	18%	28	5.0
Style & identity	40%	12	4.8
Total spending			70.9
Earned from the pool			60.0

7.09M

Spent and destroyed per season

6.00M

Released per season, fixed schedule

1.18×

Destroyed for every token minted

Spending exceeds minting by about eleven tokens a player. That gap is the demand engine: it is filled by buying a small amount — roughly **25 pence a month** at a realistic price — or by earning tolls from land you own. **Net supply falls every season, and it falls faster as more people play.**

What each burn is for

BURN	WHY THE PLAYER PAYS IT WILLINGLY
Recharge	Small and frequent. Free if you visit your land instead — so it only ever charges absentees.
Upgrade	More toll share, more defence, more status. Never a guaranteed return, and we never quote one.
Mint	Turns fragile ground into a defended deed that collects tolls and pays in liquid tokens.
Attack	The cost of ambition. Refunded if you win; burned if you lose.
Fortify	The cost of keeping what you have. Burned either way.
Style	Pure enjoyment, pure sink. The easiest thing to sell to someone having fun.

What stops it being gamed

Adding tolls and combat creates new ways to cheat. Each has a specific answer.

THE ATTACK	WHY IT FAILS
Run laps of my own land to farm tolls	You never pay a toll on your own ground, so there is nothing to collect. Tolls only come from other people.
Two accounts paying each other tolls	A toll is 2% of a reward that was already capped and verified. Round-tripping loses 98% each way — it is pure loss.
Buy every plot on a high street	The 900/day account cap. Past about one good plot, more land adds no income at all.
Club of thirty takes every deed	Contests count distinct people per day with sharply diminishing returns, and clubs face a citywide deed limit.
Farm free accounts, mint later, cash out	Minting never unlocks old earnings. Everything before the mint stays staked for ever.
Spoof GPS to claim loops	Speed, accuracy and continuity checks; each route usable once; a signature required before anything is created.
Endless attacks to grief one owner	A beaten attacker is locked out of that deed for 30 days, and each attempt costs a stake that burns.
Marathon farming	Rewards flatten after 10 km and are capped at 4.0 Effort per person per day.

THE ONE I WOULD WATCH

Deed sniping. If minting is cheap and popular ground is obvious, experienced players could mint the best paths before anyone else understands the game. Two guards: land must be held for a period before it can be minted, and minting requires the ground to have real crossing traffic already. **This needs testing in the first city — it is the likeliest thing to need a parameter change.**

The whole thing, once

Nine sentences

1. **Run a loop and the ground inside becomes yours** — the mechanic INTVL already proved works.
2. **Cut through unminted ground and you take it**, instantly and for free. A single player can take a district in a morning.
3. **Defend by running your own ground again** — defence and exercise are the same action.
4. **Mint your land and it becomes a deed**: no longer stealable by a casual pass, only by winning a seven-day siege.
5. **Every runner crossing your deed pays you 2%** of what they earned there — capped so crossing many owners never compounds.
6. **Tiers raise your toll share and defence**, but land in a dead street earns nothing however much you spent.
7. **No account earns more than 900 a day from land**, so cornering a city buys status, not income.
8. **Minting is the day your earnings turn liquid**; everything earned before it stays staked for ever, and its yield is liquid.
9. **Spending exceeds minting every season**, so supply falls — and falls faster as more people play.

2%

Toll per crossing — and 2% is also the practical ceiling

900

Daily land income cap per account, whatever you hold

7 days

A siege for a minted deed. Free ground changes hands in one run

30×

A tier-1 high street beats a tier-5 dead end

1.18×

Burned for every token minted

0

Tokens minted by tolls, staking yield or prizes — all transfers

The three questions you will be asked

"Why would I mint if my land already works?"

Because unminted ground is taken the moment somebody runs through it, earns you nothing from crossers, and pays only in locked tokens. Minting makes it defensible, toll-collecting and liquid.

"If free players can't sell, why play?"

They can. Staking yield, sponsor challenges and monthly prize draws all pay in tokens that already exist, so a free player can win sellable value from day one. Only newly minted movement rewards lock — and those buy everything in the game.

"Won't a rich player just buy the map?"

They can buy tiers, but not tolls. Land income is capped at 900 a day per account, deeds can only be taken by out-moving someone for a week, and money adds nothing to a contest score. Every token they spend trying is burned.

MovenRun Economy V7 · Territory & Tolls. Confidential, for partner review. Extends V6 with the capture, combat, toll and tier mechanics; the token rules in V6 are unchanged. The core territory loop follows mechanics proven publicly by INTVL. All figures are illustrative models of structure, not forecasts — there are no players, no revenue and no validated pricing. \$MOVE does not trade anywhere; there has been no sale, listing or allocation. Deeds are game assets, not property, and carry no income right. Nothing here is financial advice, an offer, or a promise of returns.
